

CPSC 304 Project Cover Page

Milestone #: 3

Date: Feb. 20th, 2026

Group Number: 26

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Mark Skrypnyk	86867629	p5k9k	skrypnykmark@gmail.com
Chaitanya Thakral	22283816	r1l4x	cthakral6@gmail.com
Adi Yadav	80981251	b4l2k	aditya_1007@icloud.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above.

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia.

Summary

Our project is a database for machine learning experiment tracking and model management. It records projects and phases, and tracks each experimental run with its dataset, hyperparameters, hardware configuration, produced model, and performance metrics. The goal is to make runs easy to compare and ensure results are traceable and reproducible over time.

Task Breakdown

Mark will mainly work on the frontend. He will build the page layout, navigation, forms, buttons, tables, etc. needed for the required operations and queries. He will also add success and error messages and help connect the frontend to the backend which involves planning the API routes in the backend.

Adi will mainly work on the backend and API. He will set up the backend structure, write the database connection logic, create the API routes used by the frontend, and handle validation and sanitization of user input. He will also deal with backend error handling and help make sure the frontend and backend work together properly.

Chaitanya will mainly work on the database setup and query implementation. He will turn the Milestone 2 DDL into a runnable setup script, test the script, and draft the SQL for the required queries. Mark and Adi will also help test and integrate the queries so that the overall division of work stays fair.

Everyone will help with integration testing, debugging, and demo preparation. Everyone will test the required queries through the GUI, check that the results are correct, and make sure they understand how the frontend, backend, and database work together.

Timeline

March 5 to March 9: Set up the project structure. Mark sets up the frontend and main GUI components. Adi sets up the backend, Oracle connection, and initial API routes. Chaitanya prepares the single SQL setup script with DDL and sample data and tests it.

March 10 to March 16: Implement the core operations. Mark builds the insert, update, and delete forms. Adi implements the matching backend routes and validation. Chaitanya tests the operations against the database and checks that the schema and sample data support them.

March 17 to March 23: Implement the rest of the non-hardcoded queries. Mark builds the query input forms and result displays for selection, projection, and join. Adi connects the frontend inputs to backend routes. Chaitanya writes and tests the SQL for these queries and checks that they work properly.

March 24 to March 28: Implement the four hardcoded SQL queries. Mark adds GUI controls and output displays. Adi implements the backend routes. Chaitanya writes and tests the SQL for aggregation with GROUP BY and HAVING, nested aggregation with GROUP BY, and division with help from the rest of the group during integration.

March 29 to March 31: Integration, testing, and cleanup. Mark improves the GUI and result displays. Adi improves backend error handling and input sanitization. Chaitanya improves the setup script and sample data. The group tests the full application.

April 1 to April 2: Final review and submission prep for Milestone 4. The group does final testing, checks the repository, completes PDF deliverables, and makes sure that all members can explain their work clearly.

April 3 to April 10: Demo prep. The group prepares the demo including commands to re-create and repopulate the tables, query demonstrations, and review the code to make sure everyone is prepared for technical questions.
